

## **FALORNI SRL**

### **THE PHARMACEUTICAL FACILITY MANAGEMENT FEATURES NEW DNA**

Falorni presents medicament traceability by means of RFID technology and Datamatrix, the new competitive asset for enterprises in the pharmaceutical sector.

Medicament traceability is one of the decisive stakes regarding integrated logistics today: Thanks to intense collaboration with our Technical Partner Aton S.p.A ([www.aton.eu](http://www.aton.eu)), European leader for traceability and anti-counterfeiting systems by means of automatic identification technologies, we are able to present the first operative solutions for medicament traceability according to RFID and Datamatrix standards.

We have transformed the needs of the productive chain into opportunities to create competitive assets for our clients. Our operating experience as well as our knowledge of the pharmaceutical productive chain - in which we have been involved from the 1950's side by side with our clients – together with Aton's technical competence, guarantee customized solutions to any need our customers may have.

We apply Facility Management on GPM standards, qualitative engineering, design and control, integrated supply chain, personalized production and services depending on our client's exigencies. Anticipating needs, planning solutions and following up implementations allow compressing productive chain costs and improving company performances: it is on these very issues that our customers can tell the difference. We do not manufacture products, but provide solutions where products are just one of the components. This is how we conceive FACILITY MANAGEMENT.
