

## **G.S. DIVISIONE VERNICIATURA SRL**

### **G.S.: THE EVOLUTION IN CORE COATING ENCLOSED IN THE COMPACT-ON MODEL**

Technology and experience in core coating enclosed in a monobloc machine created to satisfy the requirements of the pharmaceutical and nutraceutical/herbal industries.

The PHARMINTECH 2010 event gives G.S. the chance to showcase the monobloc COMPACT-ON production core-coating system, with 100 litres batch capacity.

The machine stands out due to the highly extensive range of products it can process and its ease of use. This allows fast installation and reduced costs both from a constructive point of view and in terms of consumption and installation.

The production equipment range offered by G.S. includes models with 50, 100, 150 and 180 litres useful capacity of finished product.

In addition to the above, the G.S. stand will exhibit the MINI-ON laboratory monobloc system with multiple capacities thanks to the interchangeable cups, i.e. from 3 to 6 or from 7 to 11 litres of finished product.

During the exhibition, the MINI-ON system will carry out aqueous film coating process demonstrations on tablets.

Representatives from the most well known coating material manufacturers will attend said processes and will be available with their experience, along with G.S. skilled personnel, to solve any type of processing problem.

PHARMINTECH 2010 will represent a chance for G.S. staff to explain to its guests the features of the newborn OC-50 model of the COMPACT-ON line, the usable capacity of which was studied according to the requirements of the typical production batches of homeopathic and nutraceutical/herbal companies, which require minimum production batches of as little as 20 ltrs. The system may also be fitted with a lab cup to further decrease the process batches down to 7-11 ltrs.

The process is managed in automatic mode, for both the production and lab systems, via a user-friendly operator terminal, according to the recipes stored therein.
