NEW DATA LOGGER MINI PLUS PDF WITH AUTOMATIC DATA DOWNLOAD IN PDF FORMAT

Data logger Mini Plus PDF for measuring and recording temperature. Measuring range -40°C...+70°C. Resolution 0.1°C. Accuracy $\pm 0.3^\circ\text{C}$. 8000 memory data. Sampling frequency from 5 seconds to 18 hours. Supplied with internal or external probe sensor. Multifunction LCD to display the current values, maximum, minimum, medium, and the period as well as alert thresholds set. Marking an event by using the Start button. Internal battery (autonomy 2 years) user-replaceable. Protection: IP65. Starting with start button with option to Delay. Stop button can be activated manually via software to stop recording. Password that can be activated by the user for the protection of programming and/or data download. Certifiable SIT. Supplied complete with plug & play USB cable for programming and downloading data. When the logger is connected, the PC automatically recognizes the logger as an external memory device. Just turn on your PC any PDF reader program to get automatic data of a report in PDF format without the need for proprietary software and of modules with receivers. Customizable PDF Reports for the graph, the list of readings and limits of alarm. The report includes a summary of measuring conditions, the duration of any alarms and measurement statistics. It also displays date, time and temperature recorded in tabular format that graph. The MiniPlus PDF is the ideal tool to monitor the temperature during storage and transport of thermo sensitive to destinations where there are no specific interfaces or software.
