

Herberts Industrieglas GmbH & Co. KG

METAGLAS SIGHTGLASSES®

METAGLAS SIGHTGLASSES®: the only sightglasses in metal-glass that give high security.

Metaglas® sightglasses are resistant to:

Pressure

Shock

Temperature

Impact

If you use sightglasses and flow indicators, it could occur that a sudden damage could cause serious problems. Personnel injury, plant damages, product leaking, dangerous discharges and production slowdown: these are among the most common consequences of a sightglass breakage. Now these problems can be solved using Metaglas® sightglasses during all process control applications.

Metaglas® can be fitted on sightglasses /flow indicators in site or installed individually with the most common fixing models: ANSI, DIN, UNI, Tri-Clamp, threaded, special productions.

Besides the safety, the Metaglas® project features allow the application in sterile and aseptic environments.

Metaglas® is distributed by Pohling Technical Solutions.

Contact us to know how this new approach to process control has already been helpful to improve the safety in more than 500 companies all over the world.
