

Jugitec Pharma® – the new solution for the glovebox

EC-certified and in accordance with the FDA – positive list (white list)

Manufacturers of protective gloves have to face new challenges due to the constantly increasing standards for the quality of products and production which are requested from the pharmaceutical industry.

The EC-certified glove box-suitable glove, “Jugitec Pharma®”, fully complies with the allowance of the FDA positive list. It is electrically conductive and multiple times autoclavable.

“Jugitec Pharma®” is a glove consisting of EPDM-base polymers. Contrary to the so far used glove box-suitable gloves the ingredients of this new development fit to FDA positive list § 177.2600, CFR 21 (“Rubber articles intended for repeated use”). Furthermore it is suitable for clean room and EX-facilities due to its good (Static-) charge dissipation capability.

“Jugitec Pharma®” provide the user best wearing comfort and enjoy an unhindered sense of touch. The other glove box-suitable gloves which are predominantly used at the moment only partly fulfill the international applicable standards. They can either be only temporary exposed to certain mediums and products or even by no means at all. The ingredients of “Jugitec Pharma®” are conform to the current FDA-positive list .

The gloves “Jugitec Pharma®” offer very good steam sterilize ability.

Sterilization tests => 50 times have proved that “Jugitec Pharma®” neither does stick together nor has any negative influences on the permeation. Further special features are its non-halogen material characteristics which thus allow the disposal at incineration facilities.

Information according to DIN EN 420

Material characteristics:

Resistant against many oxidizing chemicals, non-halogen, suitable for foodstuffs according to FDA, autoclavable, UV and ozone resistant.

Chemical resistance list according to DIN EN 374-3:2003 (European standard).

Testing chemical-protection index: Methanol category 3; caustic soda 40%; sulfuric acid 96% category 6.
