

NUOVA GUSEO SRL

THE NEW PULVERIZER "TURBINE"

Designed and realized following advanced manufacturing systems, it is able to satisfy even the most exigent customers.

The new pulverizer allows grinding of a wide range of substances and versatility in duty.

The main characteristics are:

easy setting in grinding variables;

rotor equipped with double profile hammers (hammers/knives);

speed rotation from 400 to 5000 rpm;

wide range of interchangeable classifying screens;

easiness in cleaning with extraction of rotor and screen without assistance of skilled staff;

running with inertisation;

ATEX – GMP – FDA conformity

CALIBRATOR MILL

Widely used as "delumper", our calibrator mill can be easily assembled in production lines to control granulometry out put before packaging or to subsequent grinding processes.

The main characteristics are:

easiness in disassembly. a simple clamp allows to displace the mill for cleaning operation in dedicated area;

calibration screens dismountable and replaceable (size form 0,5 to 5 mm.);

running, if necessary, with inertisation

ATEX – GMP – FDA conformity
