

# **OCS CHECKWEIGHERS GmbH**

## **HIGH PRECISION DYNAMIC WEIGHING**

OCS Checkweighers is Wipotec brand dedicated to checkweighers. OCS specializes in the development and production of extremely fast and very precise checkweighers. Such high performances are obtained thanks to the careful choice of top quality components, like our patented conveyor structure and our intelligent weigh cells based on the Electro Magnetic Force Restoration principle. The range of products is extremely wide: from the economic simple machine, to the ultra fast version able to handle more than 600 pieces per minute. Special versions are also available, like the EX model and the IP69k washable machine. OCS specializes also in the integration of other components inside its checkweigher. We can thus offer Track & Trace solutions, open flap control, camera inspection, laser and ink-jet marking in one compact and integrated machine. If this is not enough, our project department is always ready to design and deliver customer-specific solutions.

### **HC Avantgarde**

HCA is the new checkweigher designed by OCS, unrivalled in technical functionality and modern, ergonomic design. The design focused not only on industry-specific requirements but also on the extraordinary hygiene and GMP aspects. The HCA fulfills all requirements on the filling and packaging lines, especially for the pharmaceutical sectors. A new, configurable user interface with easy, intuitive controls coupled with a 15" color LCD display grants the highest degree of functionality. Simply "avant-garde!"

### **Active Vibration Compensation Technology (AVC)**

Very often in production factories there can be interferences which decrease the weighing accuracy. Very common are, in particular, vibrations of the ground caused by nearby machineries. In such situations OCS checkweighers can be equipped with Wipotec weigh cells with AVC technology that can weigh precisely and rapidly even in such critical situations thanks to their capability of measuring and compensating the vibrations.
