

OROGRAF S.R.L.

At OROGRAF the customer comes first

After over thirty years of constant endeavour, Orograf is a well-known name in the sticky label sector. Orograf has been awarded ISO 9002 CERTIFICATE, though maintaining maximum versatility during the processing stages, from

Grafic label management to in-house production of artwork up to the final printing stage. This is a competitive advantage for our Clients requiring full service label management, from design to production, as the best guarantee for top quality. We are equipped with all the sticky label printing technologies known on the market. Our typographical, silk-screen and hot printing systems allow us to print on any type of adesive material with the capacity to combine different systems on a single production line (high-resolution typographical printing, silk screen printing and hot printing with embossing) Innovation and research have always been our priorities, allowing us to create products that offer more than traditional sticky labels solutions. We also produce multi page labels and shrink sleeves. Our sleeves (produced in PET, PVC or PLA) can be printed in as many as 6 colours or 5+1 metallised colours, in order to effectively provide new look and design to all products. An important characteristic is the option for providing every sleeve with a “tear off” system, essential for easy opening after purchase
