### **ON-LINE DRAWINGS REVISION: THE NEW FRONTIER OF PARTECO'S SERVICES**

During the thirty-five years of manufacturing our clean room systems we have continuously searched for innovations and improvements in our products and services and we believe there is still room for development in our industry, especially related to the services we can offer to our customers.

To this end we are the first in our sector to develop a proprietary software based on AutoCAD in three-dimensional details that allows the customer to get a more realistic idea of how the layout will be from the earliest stages of planning and will enable us to significantly improve the production process. This unique and innovative service is now available for all our customers allowing them to review drawings on-line via a simple web connection directly on our servers.

All that is needed is a web connection and you can then download the free remote sharing software and you're ready. Thanks to the downloaded software, clients can remotely access our PC-stations without having to configure anything else: even CAD license is no longer needed as our computers are already equipped with all the necessary software.

All you need is an internet connection and you can download the free software from the remote network and you're ready to go! You do not even need a license because the CAD user works directly on our workstations equipped with all necessary tools. Once the drawings are uploaded on our shared computers, the customer himself will have the opportunity, running a simple drop down menu, to make any modifications he needs.

This is a clear example of the importance PARTECO give to the continuous improvement of products and services.
