

## **SCANWARE ELECTRONIC GMBH**

### **WELCOME TO THE NEW DIMENSION FOR PHARMACEUTICAL QUALITY CONTROL!**

scanware electronic GmbH, Germany, specialising in the development and manufacture of advanced inspection equipment is a full-solution provider for the security of pharma packaging. Its reputation is built on more than 1000 installations world-wide on various machines from all major manufacturers.

With intelligent inspection solutions scanware covers a range of traceability aspects at various stages of packaging: product integrity and mix-up, packaging material defects, print inspection (OCV/OCR) and reliable identification of products and packaging.

The product line ranges from high resolution camera-based colour and B&W vision system for 100% inline and offline inspection of products and packages to high speed ultra-compact code readers for the identification of products and packages throughout the packaging process.

scanware served up this year again an innovational highlight: the first system for three-dimensional image acquisition and inspection, which creates whole new possibilities for quality control in packaging logistics.

The design aims at cost-effectiveness and efficiency to minimise downtime. Great emphasis is placed on reliability, functionality and easy handling. High modularity and full upgradeability ensure that the system can keep pace with increasing demands on application and throughput, and allow combining different inspections or integrating additional applications. All this ensures a long service life and reduces costs throughout the lifecycle of the equipment.

With more than 30 years experience in pharmaceutical quality control and machine integration scanware has the capacity to offer customers an all-in-one solution. In-house development of vital system components is an ideal basis for customisation.

Whether standard or customer-specific applications, scanware is a competent and dependable partner for machine manufacturers and the pharmaceutical industry.
