BlisterScan:

Non-destructive leak testing machine for pharmaceutical blister packs.

BlisterScan, the non-destructive leak tester, identifies leaks as small as 7 μ in individual blister pockets of pharmaceutical or medical blister packs. It is the perfect alternative to the Methylene Blue Dye Test, enabling pharmaceutical manufacturers to reduce waste and costs!

Press Out Universal

State-of-the-art, automatic deblistering machine for all types of blister packs. Ideal for valuable and fragile product due to its unique gentle cutting action for tablets and capsules. Suitable for all blister materials including heavy gauge alu/alu and paper-backed materials. Press Out Universal is the state-of-the-art deblistering solution for the pharmaceutical industry because of its flexibility, speed and unrivalled recovery rates.

Press Out Semi-automatic

Portable, semi-automatic deblistering machine for push-through blister packs

Press-Out Semi-Automatic empties deblistering machine tablets and capsules from reject blister packs at a rate of up to 40 blisters per minute. It handles small to medium batches of push-through blisters, linear formats and multi-product blisters.
